Smart

Hide-A-Hose Retractable Systems are quiet. The central vacuum power unit is installed in the garage or mechanical room. The noise is away from your living space. That’s smart.

Hide-A-Hose Retractable Systems are versatile. Pick an attachment and vacuum carpet, tile, hardwood, stairs, windowsills, baseboards, upholstery, curtains, cupboards, fans, lint traps, mattresses, pet beds, cobwebs, over, under, down low, up high. That’s smart.

Hide-A-Hose Retractable Systems add value. Invest in your home with central vacuum system that has a life expectancy of 20+ years, keeping broken-down portables out of the landfill. That’s smart.

Healthy

Hide-A-Hose Retractable Systems are healthy. Dirt is removed through central vacuum piping in the wall, not stirred up and recirculated in the air. No more drifting particles, no more vacuum smell, giving your allergies a break. That’s healthy.

Hide-A-Hose Retractable Systems are powerful. Central vacuum power units are up to 5 times more powerful than portable vacuums. More power. Less dirt. That’s healthy.

How does Hide-A-Hose Work?

A light-weight hose is stored in the piping behind each port. Simply open the door, pull out the hose (up to 60 ft !), engage the lock and attach the cleaning tool of your choice, turn it on, and begin cleaning your entire house.

When you’re finished, disconnect the handle, disengage the lock, and watch the suction from the vacuum power unit retract the hose back into the wall! The retractable hose travels freely through tubing inside the wall that is connected to the central vacuum power unit. No more carrying a hose from inlet to inlet! A clean house is that simple.
